

ICT SERVICES & SOLUTIONS FOR YOUR BUSINESS

IT PROFESSIONAL SERVICES. INTEGRITY, QUALITY & EXPERTISE.

ITPS deliver innovative, cost saving ICT solutions to over 350 businesses across the North East and throughout the UK.

ITPS deliver innovative, cost saving ICT solutions to over 350 businesses across the North East and throughout the UK. Our task is to operate as an extension of your organisations in-house IT team using our resources and expertise to complement your own as and when you require it. Helping you free up time and money to deal with your core business challenges. With ten years experience of ICT implementations we are able to provide expertise in the following areas:

IT Infrastructure Design and Implementation

A robust and high quality network is an essential keystone to running a successful organisation. It underpins the underlying framework for delivering data and applications instantly to customers, employees and partners. At ITPS, we go far beyond optimising what customers can do over their networks today. Through our close collaboration with world-leading vendors, we provide sophisticated end-to-end networking solutions that enable organisations to rethink the way they do business. Our aim is better delivery at less cost.

Data Security

As data is one of the most important resources within an organisation it is important it is carefully protected. Security risk occurs internally and externally and ITPS can help you meet the challenges in both these areas. We work with the World's top security companies ensuring that your business can survive spam or virus attack, email encryption, and internal data leakage.

Disaster Recovery and Business Continuity Planning

As companies are increasingly dependent upon rapid access to data an increased focus must be given to Disaster Recovery (DR) and having a comprehensive Business Continuity (BC) plan in place to minimise risk. Firms that have a thought-out, detailed strategy for business continuity and disaster recovery are in a position to keep their systems running when problems occur. Business continuity and resiliency solutions from ITPS ensure your IT infrastructure is prepared for any disruption.

IT Support Services

Our aim is to operate as an extension of your in-house IT team using our resources and expertise to complement your own as and when you require it. Only pay for what you need from fielding help-desk enquiries to fully outsourced support. Our support is tailored to your unique requirements.

Voice Solutions

Businesses need reliable and secure communication tools to enable interaction with employees, customers and suppliers. Unified Communications – the convergence of voice, video and data over Internet Protocol (IP) – provides new ways for organisations and people to work together which reduces costs and improves efficiency. Many organisations migrate to IP-based networks to take advantage of the cost savings gained from converging voice and data traffic onto a single network structure. We can build converged networks that will manage service availability and traffic prioritisation requirements when running voice, video and data traffic across one network.

Hosting and Colocation

Ensuring the security of your business critical data is incredibly important that is why ITPS offer hosting, colocation and cloud computing in three, linked specialist data centres. This gives you the choice of managed hosting where we ensure you have a highly secure IT environment or you can house your own servers in our data centres or use the flexibility of cloud computing to store your data in our private or public cloud. Talk to ITPS about the best option for your business.

Workspace Recovery

It is a fact that four in ten businesses hit by a freak event are unable to recover and companies without a planned disaster recovery are more likely to fail if a disaster did occur. Even the simplest of disaster recovery planning could save your company. Our dedicated workspace recovery centre, based in Sunderland, provides all the equipment and facilities to enable you to resume your business function as quickly as possible. Our services are tailored to the exact requirements of your company and can provide a replica of your IT environment instantly upon arriving at the centre.

Green IT

Green IT refers to the practice of using computers and IT resources in a more sustainable and environmentally responsible way. By saving money on IT resources, you are able to put the money to a more proactive use. It makes good business sense to green your IT environment. From simply using less paper to conference calls instead of face to face meetings or data centre storage to reduce the need for increased dedicated workspace, there are many simple ways that you can ensure a more green IT environment. ITPS can work with you to develop the best cost and energy-saving solutions for your business needs.

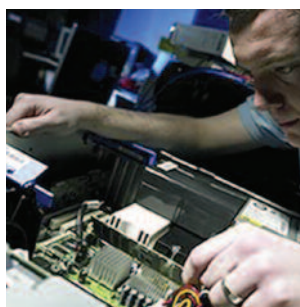

Server and Software Procurement

Ensuring that you have all the right hardware and the correct software and licences for a project is not straightforward. Especially, making sure you have a competitive price. It's so easy to miss one of the components and put your project behind schedule. You can use our purchasing experience over ten years with many varied suppliers and customers to help you make the most of your IT budget.

Virtualisation

Virtualisation offers an organisation a number of significant benefits including bottom line cost savings, IT infrastructure simplification and disaster recovery improvements as well as contributing to the green agenda. In practical terms it allows your business to:

- Run fewer servers at higher utilisation
- Save energy costs on server running and cooling
- Set up more robust and faster disaster recovery systems
- Reduce time spent loading software and software patches
- Faster deployment of new servers
- Reduce staff costs through elimination of the need for out of hours maintenance
- Release expensive office space
- Rely on ITPS's expertise in this area to unlock these benefits.

Who do we partner with?

We have ten years experience working with the leading industry vendors like IBM, Microsoft, Nortel, Samsung, Barracuda, Symantec, Cisco, VMware, BakBone, Trend and Citrix

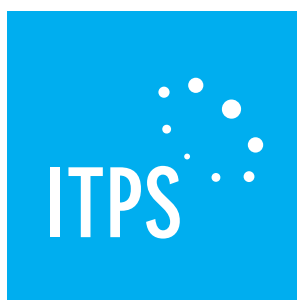

Who are our customers?

Our 350 customers are of all different sizes from 10 employees to large PLCs and whilst we are predominantly North East based we are delighted that we have many customers across the whole of the UK. We are always keen to arrange a visit to a customer reference site so just call to set one up.
