

Use Gateshead based IT experts ITPS to get the most from your IT...

Not only can we give you free expert advice but also help you apply for a grant of up to £1000

Reliable and robust internet, emailing and computer facilities are critical to the success of a business but this has to be balanced with available budget. For over ten years ITPS has been providing IT support and solutions customised to a company's specific needs and budget.

Hosting

Rather than purchasing and running your own server it may be more cost effective to host your IT system in one of our data centres using the benefits of "Cloud Computing". You can then focus on running your business rather than your IT infrastructure. Hosting gives you a number of distinct advantages:

- 1: Less capital tied up and a fixed monthly charge so you know your commitments
- 2: The data centres are equipped with high level corporate standard anti-spam and anti-virus systems which reduces the risk to your business
- 3: Top quality security, for example, the specialist data centres have 24/7 network and systems monitoring and direct uninterruptible power supply, with independent generator backup

Internet

Speed of response on internet is critical and our internet connectivity, provided in conjunction with Gateshead Council and G-ti, is one of the fastest in the UK. Allowing you to produce a cutting edge service for your customers and maximise your productivity by minimising download and upload times. Our very competitive pricing coupled with a grant of up to £1000 makes this a great time to upgrade your internet service.

Support

Getting the right level of support based on your budget and your IT experience is very important. Our flexible support allows you to take as much or a little support as you require. You can outsource all of your IT or simply use us for specific projects.

Finance

It's a cliché but cash is king in business and to help with this we can guide you through the process of applying for a grant from Gateshead Council. And if you need any additional IT equipment we have access to some very competitive leasing and finance options.

Free advice from Experts

We know how tough it can be in business and you are often asked to be an expert in all areas. To help, we are offering a free, absolutely no obligation IT assessment by our trained IT staff. This will give you a straightforward report which will help you prioritise your IT requirements and critically the costs.

To set-up an assessment call Joanne today on **0191 442 8300**
